

## QuickStream: The Key to Successful Oracle WebCenter Implementations

QuickStream is a four-to-six week service engagement aligning business stakeholders and IT organizations *before* a project begins; the insight provided helps organization avoid the negative business outcomes of IT project failures due to unmet quality, cost, and time expectations.

### PROVEN METHODOLOGY

QuickStream follows a three-step process designed to **efficiently and objectively gather and analyze information and deliver actionable tools** to prepare organizations for successful Oracle WebCenter product implementations:

- **Step 1: Discover** - gathers business and IT requirements to ensure stakeholders' needs are represented
- **Step 2: Define** - presents objective analysis of requirements and a high-level solutions design including the required hardware, software, and resource investments; allowing stakeholders to collectively determine project priorities and set realistic expectations for implementation costs, length, and solution design and functionality.
- **Step 3: Plan** - provides expert recommendations and deliverables enabling stakeholders to set mutually agreed-upon cost, resource, and time expectations and implement projects achieving rapid value and high ROI.

### ACTIONABLE DELIVERABLES

QuickStream provides organizations with the tools and materials necessary for successful implementations, including:

- Prioritized Requirements
- High-level Technical Design, including Hardware/Software Architecture
- Phase 1 Detailed Project Plan including Resource, Cost, and Time Estimate

### BENEFITS

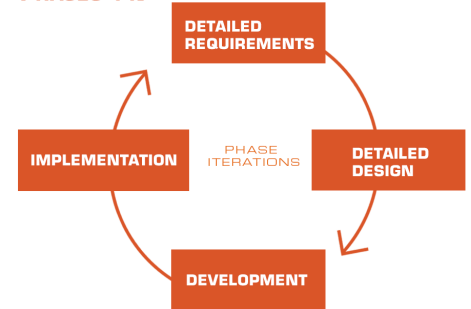

QuickStream saves you the time and hassle of doing the work yourself, and gives your resources the room they need to focus on growing your business. Rest assured that TekStream offers committed and professional resources to see your project to completion and achieve excellent results.

- Higher Project ROI
- Quicker time to Production
- Satisfied Stakeholders

## TEKSTREAM ADVANTAGES

- **Senior Expertise** – industry-recognized leaders, each with over 10 years’ experience with WebCenter deployments and support
- **Repeatable Methodology** – together our team has successfully managed over 200 successful WebCenter implementations
- **Sole-Source** – one stop for consulting and resourcing for entire deployment lifecycle
- **Oracle Partnership** – long-term and solid relationships with Oracle executive management, product management, the Deputy CTO program, marketing and consulting services
- **Cross-Stack Integration** – Provide seamless integration across all areas of the WebCenter family
- **Legacy Product Expertise** – tribal knowledge of BEA WebLogic Portal, BEA AquaLogic User Interaction (ALUI), FatWire, Optika, Plumtree and Stellent

## CUSTOMER EVOLUTIONS

- Automobile Dealer Services Provider**  
 To wring inefficiencies and costs from a legacy system that had reached its technical limits, TekStream implemented a highly-available Oracle solution capable of managing >100M customer-facing digital assets for the company’s B2B website, handling 4.9M visitors per month.
- Retailer and Distributor of Hardware, Renovation Products** By implementing and integrating Oracle WebCenter with existing 3rd party technologies, TekStream enabled the company’s major initiative to drive significant revenue through a sophisticated eCommerce site resulting in a reported return on capital investment.
- Large Commercial Airport**  
 Implementing a scalable Oracle WebCenter environment to cost-effectively organize, digitize, and manage thousands of assets while ensuring Federal compliance.
