## Oracle WebCenter FotoInStream

## MOBILE SOLUTION

### INTRODUCING FOTOINSTREAM

FotoInStream is a mobile application that lets organizations capture, annotate, report, save and share field activities remotely using a tablet or mobile device.

#### Capture key information and photos with your mobile device or tablet

Simply snap, tag and annotate field photos to capture site conditions, GPS coordinates,

into the photos to provide proof and create searchable content. This will allow you to produce custom PDF reports from the field with photos.

#### Automate filing of photos to Oracle WebCenter Content

FotoInStream provides an automated upload, organization and filing process for your photos from your mobile device or tablet to Oracle WebCenter Content. It also syncs your photos from the field with additional home office, partners, etc.

#### Centrally manage photos and account settings

FotoInStream lets you manage and control all devices within your organization, configure tags and fields and search photos across multiple devices/projects within your organization. For example, you can use keywords to quickly pull up photos, including ability to search wording within annotations on the photo.

### KEY BENEFITS OF FOTOINSTREAM

#### Save Time and Money:

- Save hours per user/per month resulting in thousands of dollars saved
- Speed up quality control and safety inspections
- Automated workflow in FotoInStream and processed in Oracle WebCenter Content

#### Better Photo Documentation (Data) Across Your Entire Organization:

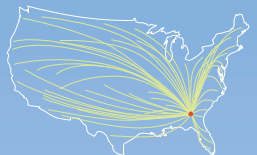

- Provides real-time progress documentation and robust field photo data
- Decrease litigation risk and warranty disputes by having field information and metadata embedded within the photos with a tamper seal hash.
